

**COMPUTERIZED WELDING PROCESS SELECTION AND PARAMETER
DETERMINATION**

TAREK ABDELHADI A. AREGIA

UNIVERSITY TECHNOLOGY MALAYSIA

“I hereby declare that I have read this project report and in my opinion this project report is sufficient in terms of scope and quality for the award of the degree of Master of Engineering (Mechanical – Advanced Manufacturing Technology)”

Signature :

Name of Supervisor : **PROF. DR. ASHRAF HAFIZ RADWAN**

Date : **Wednesday, May 05, 2010**

COMPUTERIZED WELDING PROCESS SELECTION AND PARAMETER
DETERMINATION

TAREK ABDELHADI A. AREGIA

A project report submitted in partial fulfillment of the
requirements for the award of the degree of
Master of Engineering (Mechanical – Advanced Manufacturing Technology)

Faculty of Mechanical Engineering
Universiti Teknologi Malaysia

MAY 2010

I declare that this project report entitled “Computerized Welding Process Selection and Parameter Determination” is the result of my own research except as cited in the references. The project report has not been accepted for any degree and is not concurrently submitted in candidature of any other degree.

Name : **TAREK ABDELHADI A. AREGIA**
Date : **Wednesday, May 05, 2010**

To my beloved Family and Friends

To my respected supervisor

ACKNOWLEDGEMENT

First and foremost, I wish to express my sincere appreciation to my thesis supervisor Prof. Dr. Ashraf Hafiz Radwan for his precious guidance, encouragement, constructive criticisms, advice, knowledge, and motivation. Without his continual support and interest, this thesis would not have been the same as presented here.

Besides that, I would also like to express my thank you to all my fellow postgraduate course mates for their support. My sincere appreciation also extends to all my colleagues, friends and others who have provided assistance at various occasions. Their views and tips are useful indeed. Unfortunately, it is not possible to list all of them in this limited space. A very special appreciation goes to all my family members and my beloved parents for their continual supports (funding and moral support), love and care.

ABSTRACT

Welding is a materials joining process in which two or more parts are coalesced at their contacting surfaces by a suitable application of heat and/or pressure. In today technology, welding is an important process in manufacture and assembly project. There is a need for welding expertise to get the best welding qualities. For small and medium industry, employing a welding expert is quite costly. The purpose of this study is to design and develop an expert system to select suitable welding process and determining the optimum welding parameters. While conducting this project, the important question that the project focused on was how an effective and efficient computerized system can help in selecting the welding process and determine process selection parameters. Also an exclusive research was done to collect data about the arc and other welding processes parameters, designing database for the welding processes, welding parameters, and work-pieces characteristics related to the parameters of welding process, and also an algorithms was developed to find out the most suitable welding process and its parameters related to a specific work-piece. So having an expert system that helps in selecting the suitable welding process and determine process parameters can help industries and welders to set the welding process time, less expensive and extensive clerical work, and provide reliable and consistent welding processes. However, the required methodology for this project development began from initial planning, an analysis, design, development of a prototype, and finally

implementation and application testing of the system was executed. Farther more, evolutionary prototype is chosen as the system development methodology for this project. On the other hand, a prototype of the proposed system was developed and deployed by using Oracle Application Express version 3.2 as a web page developer tool and Oracle Database 11g as data storage application. Finally, this project is developed to achieve the objective of improving the welding processes selections by using expert system, which is a computer program with reasoning capabilities to solve a particular problem.

ABSTRAK

Penaterian merupakan satu proses pencantuman bahan di mana satu atau lebih bahagian disatukan pada permukaan sentuhan setiapnya, dengan mengaplikasikan haba dan atau tekanan. Dalam teknologi hari ini, pematesian merupakan proses yang penting dalam projek pemasangan dan pembuatan. Wujudnya satu keperluan terhadap pakar pematerian bagi mendapatkan kualiti pematerian yang terbaik. Bagi industri kecil dan sederhana, mengambil seorang pakar pematerian adalah agak mahal. Tujuan kajian ini adalah untuk merekabentuk dan membangunkan sebuah sistem pakar untuk memilih proses pematesian yang sesuai dan menentukan parameter pematerian yang optimum. Semasa mengendalikan projek ini, persoalan penting yang difokuskan adalah bagaimana sebuah sistem berkomputer yang berkesan dan cekap (efektif dan efisien) dapat membantu dalam memilih proses pematesian dan menentukan pemilihan parameter proses. Satu kajian eksklusif juga telah dilaksanakan untuk mengumpul data tentang lengkok dan parameter proses pematerian yang lain, merekabentuk rujukan data untuk proses pematerian, juga sebuah algorithm telah dibongkarkan untuk menentukan proses pematerian yang paling sesuai peserta parameternya yang berkenaan dengan hasil kerja tertentu. Maka, mempunyai sebuah sistem pakar yang membantu memilih proses pematerian yang sesuai dan menentukan parameter proses dapat membantu industri dan juga pemateri untuk menentukan masa proses pematerian, kerja-kerja perkeranian yang lebih murah dan singkat, dan menyediakan satu proses pematerian yang boleh dipercayai dan konsisten. Walaubgaimanapun, kaedah yang diperlukan bagi pembangunan projek ini bermula daripada perancangan awal, analisis, rekabentuk, pembinaan prototaip, dan

akhirnya pelaksanaan dan pengaplikasian ujian terhadap sistem yang telah dibina. Tambahan lagi, evolusi prototaip telah dipilih sebagai kaedah pembangunan sistem projek ini. Dengan kata lain, prototaip sistem yang dicadangkan telah dibangunkan dan dilaksanakan dengan menggunakan Oracle Application Express version 3.2 sebagai pembangun muka web, dan Oracle database 11g sebagai aplikasi peroyimpan data. Akhir sekah, projek ini telah dijayakan untuk mencapai objektifnya memperbaiki pemilihan proses pematerian dengan menggunakan sistem pakar yang merupakan sebuah program berkomputer yang perkebolehan 'reasoning' untuk menyelesaikan masalah tertentu.

CHAPTER 1

PROJECT OVERVIEW

1.1. Introduction

Welding is a fabrication or sculptural process that joins materials, usually metals or thermoplastics, by causing coalescence. This is often done by melting the workpieces and adding a filler material to form a pool of molten material (the weld pool) that cools to become a strong joint, with pressure sometimes used in conjunction with heat, or by itself, to produce the weld. This is in contrast with soldering and brazing, which involve melting a lower-melting-point material between the workpieces to form a bond between them, without melting the workpieces.

Many different energy sources can be used for welding, including a gas flame, an electric arc, a laser, an electron beam, friction, and ultrasound. While often an industrial process, welding can be done in many different environments, including open air, under water and in outer space. Regardless of location, however, welding remains dangerous,

and precautions must be taken to avoid burns, electric shock, eye damage, poisonous fumes, and overexposure to ultraviolet light.

Besides that, Arc welding uses a welding power supply to create an electric arc between an electrode and the base material to melt the metals at the welding point. Welding in general can be considered as a multi-input multi-output process. Finally, the process of arc welding is widely used because of its low capital and running costs.

1.2. Problem Background

In today technology, welding is an important process in manufacture and assembly project. Welding expertise is required to generate a good welding procedure. For small and medium industry, employing a welding expert is quite costly. Therefore, it would be indeed an asset to the industry if the expertise on the particular domain could be pooled and configured into an expert system, which is a computer program with reasoning capabilities to solve a particular problem.

The existing computerized welding expert systems have same drawbacks regarding the selecting and determining the welding parameters.

1.3. Statement of the Problem

While conducting this study, the main question to be focused on is how an effective and efficient computerized system can help in selecting the welding process and determine process selection parameters.

1.4. Project Objectives

The main objective of this project is to design and develop an expert system to select suitable welding process and determining the optimum welding parameters

1.5. Scope

The scopes of this project are:

1. Collecting data about the welding processes parameters.
2. Designing database for The welding processes, welding parameters, and work-pieces characteristics related to the parameters of welding processes
3. Developing algorithms to find out the most suitable welding process and its parameters related to a specific work-piece.

1.6. Importance of the project

The selection of a suitable welding process and determining the optimum parameters is not an easy task. This requires experience and involves a substantial amount of the time, expensive and extensive clerical work. The availability of expertise to generate a set of welding procedure is either expensive, scarce, or situations for which specialists do not have time.

So, with using the expert system, the welder just need to specify the workpiece materials, dimensions. Then the system will provide the suitable welding process and the optimum welding parameters.

The advantages of this computerized welding process selection system are:

1. Provides reliable, and consistent welding processes
2. Available 24/7
3. Saving the expertise salaries and their benefits

1.7. Chapter Summary

This chapter contains brief introduction of arc welding, background of the problem, statement of the problem, objectives of the project, scope, importance of the project, and chapter summary.
