ACKNOWLEDGMENT

There are many people who have directly and indirectly helped me in successfully completing this study. Thank you very much to Assoc. Prof. Wardah Zainal Abidin who has been a very helpful supervisor whom always guide and inspire me throughout the study. Special thank also goes to both my parents, Mr. Abdullah Abbas and Mrs. Patimah Che Dat for their love and support endlessly in all ways. To my elder brother and younger sisters, thank you for your helping hands.

I would like to express my sincere appreciation to teachers who have kindly accepted my request to be interviewed in SK Bukit Cina, SK Seri Bandar and NASOM. Thank you very much for the useful information. To all members in myspecialchildren.com, thank you for spending some times to answer my questionnaire and for the nice and warm chatting that we had online. I would also thank my course mates for their brilliant ideas and views.

Thank you very much to all whom had involved directly and indirectly in helping me to completely present this study.

ABSTRACT

The purpose of this study is to analyze the current practice of knowledge sharing among offline and online community of practice pertaining to the special children areas focusing on mental disabilities. The study focused on how knowledge sharing is carried specifically out among parents and generally among teachers and doctors of these children. The concept of knowledge sharing as one of the component in knowledge management was discussed thoroughly on the processes involved, the developed framework, and the factors that encourage and hinder people to or from participating and contributing to the knowledge sharing activity. From the author's findings, knowledge sharing activities did occur actively in the online community of practice compared to offline community due to several factors; time and geographical boundaries, low income and low information technology literacy. The concept of community of practice was further analyzed through the practice of several e-groups. The knowledge sharing activities were evaluated based on the SECI model proposed by Nonaka and Takeuchi (1995). The results of the study show that knowledge sharing activities did contribute towards the development of the special children in many ways. From the discourse analysis conducted in one e-group on two selected discussion topics, the results show that inquiry and storytelling are the common nature of discourse and the common type of discourse is experiential dialogue. The study found out that the leader in community of practice play a very important role to maintain the interest of the community to remain engaged in the dialogue and to sustain the existence of the community. The result of the study has led to the development of one e-group prototype where the features available in the prototype are based from the gathered users' requirement and are coherence with the processes in the SECI model.

ABSTRAK

Tujuan kajian ini dijalankan adalah untuk menganalisa praktis semasa perkongsian maklumat komuniti praktis di dalam dan di luar talian yang berkaitan dengan kanak – kanak istimewa khususnya masalah mental. Fokus kajian adalah terhadap bagaimana perkongsian maklumat dipraktikkan oleh khususnya ibu bapa dan amnya oleh guru dan doktor kanak – kanak istimewa ini. Konsep perkongsian maklumat yang merupakan salah satu komponen pengurusan maklumat telah dibincangkan dengan mendalam menerusi proses – proses yang terlibat, rangkakerja yang dibangunkan, dan faktor – faktor yang menggalakkan dan menghalang orang kepada dan daripada menyertai dan menyumbang kepada aktiviti perkongsian maklumat. Hasil kajian menunjukkan aktiviti perkongsian maklumat berlaku aktif dalam komuniti praktis dalam talian berbanding komuniti praktis luar talian disebabkan oleh beberapa faktor; kekangan masa dan geografi, pendapatan rendah dan pengetahuan teknologi maklumat rendah. Konsep komuniti praktis dianalisa lebih lanjut melalui praktis beberapa e-kumpulan. Aktiviti perkongsian maklumat telah dinilai berdasarkan model SECI yang telah diperkenalkan oleh Nonaka dan Takeuchi (1995). Keputusan kajian menunjukkan bahawa aktiviti perkongsian maklumat telah membantu perkembangan kanak – kanak istimewa dalam pelbagai cara. Daripada analisis wacana yang dijalankan dalam satu e-kumpulan berkaitan dua tajuk diskusi, kajian menunjukkan bahawa pertanyaan dan penceritaan merupakan asal kebiasaan wacana dan dialog pengalaman merupakan jenis kebiasaan wacana. Kajian mendapati ketua dalam sesebuah komuniti praktis memainkan peranan penting untuk mempertahankan minat komuniti untuk terlibat dalam dialog dan mempertahankan kelangsungan komuniti. Hasil kajian telah membawa kepada pembangunan sebuah prototaip e-kumpulan di mana fungsi – fungsi yang terdapat dalam prototaip adalah berdasarkan kepada permintaan pengguna dan berpadanan dengan proses – proses dalam model SECI.

CHAPTER 1

PROJECT OVERVIEW

1.1 Introduction

This project is conducted to analyze the current practice of knowledge sharing among offline and online community of practice pertaining to the special children areas focusing on mental disabilities such as : developmental delay, hyperactivity, autism, learning disabilities, attention deficit disorder, attention deficit hyperactivity disorder or something similar. The main motivation towards conducting this project is on the assumption that knowledge sharing can help towards the development of this special children.

The project will look into details on knowledge sharing concept as one of the component in knowledge management focusing on the processes involved, the developed framework, and the factors that encourage and hinder people to and from contributing to knowledge sharing activity.

In this project, the concept of community of practice which is also known as community of learning (Gherardi and Nicolini, 2000) is analyzed through the

practice of several e-groups as specific purpose designed e-groups can be classified as community of practice. E-groups can be classified as web-based community of practice.

The main outcome of this project will be the result from the study on concept of knowledge sharing and community of practice, what is the current practice of knowledge sharing in today offline and online community of practice, how knowledge sharing can help towards the development of the special children and a prototype of a better e-group in which the features in the e-groups will be based on the result of the study.

1.2 Background of Problem

Special children are different from the normal children. They may be different physically or mentally. Despite of their differences, they deserve the rights to be loved and taken care of. Each day the individual related to these special children (ex: parents, teachers, doctors) will somehow or rather face new challenges in taking care of these special children. Together with the new challenges, sure some of them have found new ways how to tackle the challenges. It would be very useful if the knowledge on how to tackle the problems in one's mind can be shared with another person, where the person can use the knowledge to overcome his/her problem in dealing with the special children.

Knowledge sharing, as one of the powerful knowledge management component, if being studied properly and implemented in the community of practice pertaining to the special children can actually help towards the development of these children. Knowledge sharing, simply put in words, is a concept that allows

knowledge of one party to be shared with another party, which indirectly led to the creation of a new knowledge. Parents, teachers, and doctors, related to the special children will surely have different experience and knowledge regarding any matters related to these special children. They can actually help and support each other by sharing knowledge. If they cannot help directly with the problem, they can help by referring to another person whom they know can help to solve the problem.

These people (parents, teachers, doctors) actually have a lot experience and ideas in mind. If the intellectual assets of each of the individual can be shared among each other, there is no doubt that the knowledge sharing practice will improve the development of these special children in many aspects.

1.3 Statement of the Problem

The main issues that will be addressed in this project are :

- i. What is the current practice of knowledge sharing in offline and online community of practice?
- ii. What are the factors that encourage and hinder people from contributing to knowledge sharing activities in community of practice?
- iii. How to motivate people to contribute to knowledge sharing activities in community of practice?
- iv. How can knowledge sharing contribute towards the development of the special children through the practice of community of practice?
- v. What are the features that should be included in an online community of practice specifically the e-groups so that it will be beneficial towards the development of special children?

- vi. How information technology can overcome the problem occurred in knowledge sharing of offline community of practice by enabling and supporting online community of practice?
- vii. Does knowledge sharing process/activity is implemented in the current e-groups?

1.4 Project Objective

- i. To study and analyze the current practice of knowledge sharing among offline and online community of practice pertaining to special children focuses on mental disabilities.
- ii. To analyze the nature and type of discourse in knowledge sharing.
- iii. To analyze how knowledge sharing can contribute towards the development of the special children.
- iv. To develop a working model and test the model via producing an alternative e - groups.

1.5 Scope

- i. This project will discuss in details the concept of knowledge sharing as one of the component in knowledge management including its framework, architectures, and processes involved.

- ii. This project will discuss in details the concept of community of practice and will analyzed several e-groups as a case study to find out the current practice of knowledge sharing in online community of practice.
- iii. A semi-structured interview will be conducted to find out what is the current practice of knowledge sharing in offline community of practice.
- iv. The target user for the developed system will be : parent of special children, teacher of special children, and doctors of special children.

1.6 Importance of Project

The project is important towards the development of special children in term of :

- i. Improve public awareness on the importance of knowledge sharing towards the development of the special children.
- ii. Improve public knowledge on any related matters of special children.
- iii. Improve people contribution in knowledge sharing so that the knowledge can be fully utilized and leverage towards the development of special children.
- iv. The ability of one's knowledge to be shared among the rest of the members in community of practice will help or give an idea on how to solve certain problem.
- v. Improve current practice of knowledge sharing in community of practice.
- vi. Knowledge sharing among community of practice will help to solve real problem in real environment.

1.7 Chapter Summary

This chapter gives a thorough description of the project by discussing the overview of the project in the introduction section, discuss the background of the problem and statement of the problem. The chapter also presents the objective of the project, scope and importance of the project.
