

THE INFLUENCE OF CULTURE ON THE USE OF STREET SPACE IN THREE
CITIES IN TAMIL NADU, INDIA:
CHENNAI, PONDICHERRY, AND MADURAI

DIANA CHAN YIAN LIAN

This dissertation is submitted in partial fulfillment of the requirements for the award of

Masters of Science in Urban Design

Urban Design
Faculty of Built Environment
Universiti Teknologi Malaysia

November 2009

ACKNOWLEDGEMENT

I hereby want to express my heart-felt gratitude towards:

God § for His wonderful Grace and Mercy

My family § for their love, patience, and support

My brothers and sisters in Christ § for their faithful prayers and care

My Supervisor Assoc. Prof. Dr. Syed Zainol Abidin Idid §
for his passionate dedication, kindness, and guidance

My University UTM § for the hope we have

All Glory, all Honour, all Praise to God!

ABSTRACT

‘Think of a city and what comes to mind? It is the streets. If a city’s streets look interesting the city looks interesting; if they look dull, the city looks dull (Jacobs, 1961). Street life is not only of contemporary interest. The appearance of city streets was recorded by artists and architects of the Renaissance including Perruzzi, Bramante, Michelangelo, and Piranesi (Bacon, 1969). The interest continues as street activities is photographed and recorded in writings, movies, etc. A developing country of rich, diverse culture like Incredible India certainly fascinates us with incredible streets. The multifunctional structure of the Indian street provides an admixture of overlapping spaces that merge public and private, work and leisure, and holy and profane activities (Edensor, 1998). This research examine the culture of the Indian streets in Tamil Nadu: Chennai, Pondicherry, and Madurai, to provide a contrast to the routine and predictable modern day streets and its urban design, with the Indian streets which is less regulated yet express strongly vibrant street life, revealing the Indian people’s way of life. The key principle during the field study and the analysis that follows is to understand the social system, culture and belief system of the studied context, in order to understand and comprehend their behavior on the streets and the use of street space. This research will enhance the understanding of the actual function of space which can be used as reference data for urban design, to be responsive in specific cultural context, such as the Indian streets in Tamil Nadu.

(Keywords: Culture, Use of Street Space, Chennai, Madurai, Pondicherry)

ABSTRAK

Fikir tentang sebuah Bandar dan apakah yang timbul di dalam pemikiran anda? Ia adalah jalan. Sekiranya jalan di Bandar kelihatan menarik, maka Bandar juga kelihatan menarik; sekiranya ia kelihatan pudar, maka Bandar juga kelihatan pudar (Jacobs, 1961). *Street life* (Kehidupan jalan) bukan sahaja penarikan zaman ini. Rupa jalan Bandar telah direkodkan oleh pelukis dan arkitek di era Renaissance, antaranya termasuk Perruzzi, Bramante, Michelangelo, dan Piranesi (Bacon, 1969). Penarikan tersebut berterusan dengan aktiviti-aktiviti jalan direkodkan dalam gambar foto dan catatan dalam sastera, wayang dan sebagainya. Sesebuah negara membangun yang kaya dengan kepelbagaian budaya seperti *Incredible* (Mustahil) India sememangnya memikat hati kita dengan jalannya juga. Struktur jalan di India yang berkepelbagaian fungsi dan membekalkan ruang yang bertimbun campur, yang menggaulkan aktiviti-aktiviti awam dengan persendirian, pekerjaan dengan rekreasi, dan yang suci dengan yang sebaliknya (Edensor, 1998). Penyelidikan ini mengkaji tentang budaya jalan di India di Tamil Nadu: Chennai, Pondicherry, dan Madurai, untuk mendedahkan satu kontras antara reka bentuk jalan pada zaman moden ini yang selalunya mengikuti aturan biasa, dengan jalan di India yang kurang dikawal peraturan tetapi menggambarkan *street life* yang bersemangat dan menunjukkan cara hidup masyarakat India. Prinsip utama sewaktu kajian tapak dan analisis yang berikutnya bertujuan untuk memahami sysetm social, budaya dan kepercayaan di dalam konteks tapak kajian. Ini adalah untuk memahami keperilakuan manusia di jalan dan cara menggunakan ruang jalan. Penyelidikan ini akan menambahkan pemahaman terhadap fungsi sebenar ruang jalan, dan boleh digunakan sebagai data rujukan untuk reka bentuk Bandar, agar lebih responsif di sesebuah konteks budaya, contohnya di jalan di Tamil Nadu, India.

3.7	It is difficult to move in a straight line in an Indian street (Edensor, 1998)
3.8	Various movement of goods and people
3.9	Mylapore Festival is celebrated on the street with kolam contest and various performances

- 3.10 Kolam design lined the street during annual Mylapore Festival, attracting local and foreigner to North Mada Street
- 3.11 Rue Jawaharlal Nehru, Mission Street, and Goubert Road
- 3.12 Rue Jawaharlal Nehru (market street) and Mission Street
- 3.13 French Quarter along the Bay of Bengal (East) and Tamil quarter (West)
- 3.14 French Quarter with street paving, and trees at both sides, resembling the boulevard
- 3.15 Ashram key places, ashram departments and ashram guest houses saturate the town and its streets, adding a sense of charm and mystery
- 3.16 Street in Tamil quarter
- 3.17 The configuration of the Tamil houses offers the front area *thinnaish* along the streets as public verandas with masonry seats for guests and visitors. The street becomes a friendly environment, which reflects the sharing spirit in the Indian culture
- 3.18 East, West, North South Chithirai Street is connected in a rectangular, surrounding Meenakshi Amman Temple, reflecting the cosmic centre of the city
- 3.19 Pedestrianized Chithirai Street
- 3.20 Pedestrian, vehicles and animals share E Avani Moola Street, Madurai
- 4.1 The Chennai Central Railway Station has a large flow of passengers each day
- 4.2 Manifestations of local beliefs and festivals can be seen on the street shop frontage and at the shop entrance: Plants for decorations and sacrifices
- 4.3 Shops that open out to the streets offers active frontage to the street
- 4.4 Eager street vendors lined the streets around the temple
- 4.5 Cooking on the street, Mylapore, Chennai
- 4.6 Milk tea poured from stainless steel container into small cups for customers
- 4.7 Temple item on display for sale on the street
- 4.8 Portable stalls structures are set up using minimal material

- 4.9 Stalls on wheels being pushed manually on the road alongside other vehicles
- 4.10 Mobile street vendors carrying flower garlands on a plate or in a basket
- 4.11 Streets (road) used for motorbike parking during the day transformed into public “bedroom” for the homeless when the sun sets
- 4.12 View from the street along Marina Beach at night
- 4.13 Slum dwelling along the street
- 4.14 The entrance to Sri Aurobindo Ashram in the French Quarter with the symbolic lotus and the hexagonal star
- 4.15 The iron grilled gate entrance to the Ashram’s cottage industry and the signage of the Ashram’s restaurant
- 4.16 The ashram-owned shops have its own distinct frontage
- 4.17 The influence of ashram in local streets
- 4.18 Kolam or rangoli design at the entrance of houses
- 4.19 Three of the entrances to Goubert Market from Nehru Street
- 4.20 A spill-out area from the market along Nehru Street
- 4.21 The major entrances to the street market from Nehru Street
- 4.22 The street market with narrow walkway
- 4.23 Shops inside street market
- 4.24 Narrow market streets (fully pedestrianized)
- 4.25 Goods occupy corridor space
- 4.26 Goods for sale, tailoring and ironing, cooking, all happen on the corridor space along the street
- 4.27 Light structures for temporary stalls
- 4.28 Vendors on wheels along Goubert Avenue (Beach Road) selling snacks and fruits
- 4.29 Street vendors in different forms, of different age group (from children to elderly), selling different goods such as cashew nuts and woman’s hair, and services such as palm-reading
- 4.30 Services such as fortune-telling are very common

- 4.31 A child selling colorful pouches who constantly plead for sympathy from his potential customers
- 4.32 Bunches of pink cotton candy add colours and charms to the street of Pondicherry
- 4.33 Friendly souvenir peddlers entice visitors into a conversation
- 4.34 The community of mobile street vendors at the beach gathers for chit chat, enjoy a moment of laughter even though business is slow
- 4.35 Men and women in the construction sites along the streets
- 4.36 Public street used for private activity, turning into bedroom under broad daylight at Nehru Street and Mission Street
- 4.37 Child play along side the mother, filling his paper folded boat with dirt and sand on the floor
- 4.38 A little girl and her sibling take turn to play the swing tied on the structure of an electric pylon
- 4.39 A child is playing with her doll with broken limbs while the exhausted mother took a nap on the street floor
- 4.40 Washing dishes and containers on the street
- 4.41 Mother and children having a moment of conflict
- 4.42 Street beggars of all age group, from children to the elderly
- 4.43 People sitting on the streets in groups, including workers and women. (Figure) Believers receiving advice outside the church building
- 4.44 Lunch and drinks by the street
- 4.45 Women who prayed outside the Menakshi Temple at East Chithirai Street.
- 4.46 Streets outside the temple area are clustered with slippers and shoes as the devotees visit their temple
- 4.47 A cow is considered a sacred animal by the Hindu. Beside the temple, a cow just had a feast on bananas
- 4.48 An occasional burning wick used for worship along the fours sides of Chithirai Street which encircles the Meenakshi Temple
- 4.49 The business set up in the city is grouped and a number of shops selling the same products can be seen in Madurai

- 4.50 Creative use of street space: displaying goods on the walls of unfinished heritage
- 4.51 The street is a vibrant place which also has a sense of humour: the woman street vendor asked someone to pick up her fresh tomatoes fallen from her overloaded basket
- 4.52 A woman is asking the shop owner if he want some sweet mangoes
- 4.53 Two friends meeting up at a shop
- 4.54 The fortune teller's continuous existence on the streets shows that there is continuous reliance and belief from the people, especially the fated women, and thus, continuous business is allowed to make a living
- 4.55 Small size merchants selling glass beads
- 4.56 Women selling jasmine garlands
- 4.57 A woman making a living by sorting out rubbish by the streets near Meenakshi Temple
- 4.58 The use of various transformations of vehicles on the road to carry goods and recyclable materials
- 4.59 A flâneurs culture
- 4.60 The 'urban living room' for gathering and chatting
- 4.61 A couple taking a bite after their visit and sacrifices made at the Meenakshi temple (basket of flowers and broken-shell of coconut
- 4.62 It is a common scene to see people standing and eating food sold along the streets using their hands
- 4.63 Beggar community range from young children to young mothers to elderly woman, a phenomenon common all over India

CHAPTER 1

INTRODUCTION

1.1 Introduction

This research examines the influence of culture on the use of street space in the streets of three cities in Tamil Nadu, South India: Chennai, Pondicherry, and Madurai. These three selected study area are the three major cities in Tamil Nadu, South India which is known for its preserved genuine Indian culture. These three cities, each represent a different settings: Chennai as the state capital, Pondicherry as a former French colony, and Madurai as the traditional Indian temple city. The primary objective is to observe local culture associated with human activities on the streets in these cities. The parameters of culture considered in this research are religion and beliefs, economic culture, lifestyle and behaviour.

Culture expresses itself in both physical objects and subjective responses to the environment (Fan Ng, 1998). Therefore, culture can influence the use of street space and the character of street in a particular setting, in this case, the streets in India. Rapoport (1987) argues that cultural variables are primary for any activity, including walking and others, occurring in streets. It is culture that structures behaviour and helps explain the use or non-use of streets and other urban spaces – or of other settings. Thus, the use of streets by pedestrians is primarily culturally based as physical environment does not totally determine behaviour, as in this research context, the culturally rich and diverse India.

Omar (2007) in his research on the human activity in covered urban space, states that urban streets are one of the important physical elements of a city. The street is a place where human activities are concentrated. It functions mainly as a channel of movement that connects one place to the other. The multi-functions of a street have been stated by various scholars including Jacobs (1961); Rykwert (1986); Czaenowsky (1986); Moughtin (2003); Rapoport (1987) and Jacobs (1993). The roles of streets in an urban life can be summarised as follows: street is a channel of movement, a communication space, a public space, a place of social and commercial encounter, and exchange, a place to do business, a political space as well as a symbolic and ceremonial space in the city. He also explained that streets of Asian cities have specialities and significance in the context of urban public life. An Asian street has cultural and traditional functions in the city. It serves as a public space, a place where people come together to do commerce, to eat and to socialize. Similarly, Poerbo (2004) argues that the urban realm of many Asian cities is not attributed to great parks, squares, or even boulevards, as that in many European cities. On the contrary, the urban life takes place on the streets and along its corridors. The narrow tunnel in the front of buildings and corridor has become a suitable space to move and to interact with each other (Poerbo, 2004).

This chapter presents the overall structure of the study. The research problem was explored in the second section. This is followed by the research assumption. Research questions in the fourth section. The fifth section highlights the aim of the research, and is followed by the study objectives. The seventh section establishes the scope and limitations of the research. The final section presents the research methodology and techniques.

1.2 Problem Statement

This research examine the culture of the Indian streets, to provide a contrast to the routine and predictable modern day streets and its urban design, with the Indian streets which is less regulated yet express strongly the Indian people's way of life. It is important that explorations of the street should not fall into the ethnocentric pitfalls of so many social and cultural theories, which examine distinct Western contexts and produce ideas that are taken as universally applicable. However established theories will be referred to as a guide and comparison throughout the study. The principle aim is to examine the rich diversity of social activity in Indian streets.

As urban planners increasingly recognize the ethno-cultural diversity of cities, urban design practice must be just as responsive if it is to remain integral to urban planning. While cultural diversity is a widely acknowledged component of many cities, discussion of cultural diversity is rare in urban design circles. Perhaps this neglect is because urban design practice is based on universalistic principles and is commonly oriented towards a homogeneous society (Sandeep Kumar, 2004).

1.3 Assumption/Hypothesis

Culture influences the richness of activities and use of street space in the streets in India. Other influence might be the political, economic and demographic variables.

1.4 Research Questions

The key research question associated with the influence of culture on the use of street space, which relates to how the activities and the people's culture influence the character of the streets and the use of it? Thus, the following questions arise:

- i. What is the local culture of the people?
- ii. What are the activities or how is the use of street space?

1.5 Research Aim

The purpose of the study is to examine the influence of culture on the use of street space in three cities in Tamil Nadu, India: Chennai, Pondicherry, and Madurai, in order to develop critical thinking and discussion on the cultural diversity in urban design. It will provide indicators of the actual function of space which can be used as reference data for urban design, to be responsive in specific cultural context.

1.6 Research Objectives

1. To identify the activities associated with local culture.
2. To examine the character of activities and use of street space, and the influence of culture.

1.7 Scope of Research

The study is limited to the three parameters of influence of culture on the use of street space. The focus is mainly on the religion and beliefs, the economic culture, the lifestyle and behaviour. The concern is only in several studied context in Tamil Nadu, each having a strong identity: Chennai as a state capital city, Pondicherry as a former French colony, and

Madurai as a traditional temple city. This study is not intended to idealize or romanticize the Indian street as an ultimate answer to the future of street and urban design, but to learn from the different experience offered by the Indian street.

1.8 Research Gap

Only several aspects of culture are focused in this study, while some aspects are not discussed here. The use of street space is influenced by many aspects in culture, and also other parameters besides religion and beliefs, the economic culture, lifestyle and behaviour.

1.9 Research Methodology and Techniques

The analysis on culture and activities on the streets in India provide information on the diverse use of the Indian street, and the different aspects of culture that influence their uses. The theoretical background will be developed for the purpose of the study as to the method of observation and analysis. The observation was recorded by means of cultural parameters, indicating the categories of cultural influence (religion and beliefs, the economic culture, lifestyle and behaviour) to be observed during the three weeks field study in Tamil Nadu, India.

In order to acquire the primary relevant data for the purpose of the study, only observation of the street activities was conducted. Observations of actual use are important to answer questions about usage such as: who does what? Where? When? Including and excluding whom? and Why? (Rapoport, 1977). The field survey in India was conducted between September and October 2009. Due to time and other constraints, extensive detailed study cannot be carried out. For example the behavioral observation could be carried out during the different seasons but it was limited to three week's observation in several cities in India.

The key principle during the field study and the analysis that follows is to understand the social system, belief system of the studied context, in order to understand and comprehend their situation and behaviour from their stand and perspectives.

The purpose of the study is to examine the influence of culture on the use of street space in three cities in Tamil Nadu, India: Chennai, Pondicherry, and Madurai. Culture is the vital factor in determining how people will arrange themselves spatially for the purpose of living and interacting with one another.

Major steps involved in the study are:

- a) Establishment of the local culture, human activity profile and the use of street space that occur on an average day.
- b) Photographic and video recording of the behaviour events as well as and interviews along the street.
- c) Qualitative analysis of recorded data.
