

Construction industry & economic development: The Malaysian scene

Synopsis:

This book describes the development of Malaysian construction industry within the context of the country's economic development. It focuses on the essence and consequences of Malaysia's economic development, the impact of the country's economic development on the growth and changes in construction output, the development of the contracting sector and issues relating to the industry's resources in response to the growth and changes in construction output, and the probable impact of future economic development on the construction industry. This book will be of interest to students from the field of construction and those who interested in the economics and development of the construction industry.

Construction industry & economic development: The Malaysian scene

Kandungan

Pengenalan
