Abstract

Library application is a computer program designed specifically to manage the data of borrowing and returning books in order to be presented more quickly. In addition, for the achievement of the purpose of the operation itself is to facilitate students by providing facilities. In making this application there were some important data such as Member data, Books, Transactions, and Admin. From the data were expected to be the basis made for this application in order to present the information needed quickly and precisely, and to improve the performance of librarians. Requirements as a member of the library is a Student of SMP Negeri 1 Talangpadang, then create a registration form to become a member of SMP Negeri 1 Talangpadang Students. The expected result of making this system was that the data that had been stored and managed manually can begin to be computerized so as to further advance the performance and facilitate librarians in carrying out activities related to the library itself.

Keywords: Student; Library; Application; School.

1. Introduction

The world of education is inseparable from reading. By reading, we can get very useful information, both from education, health, information from domestic and abroad. If student never wants to read it is certain the knowledge will not be perfect because reading is a window to open a new world.

Based on papers [1-54], in this globalization era where the advancement of information and communication technology (ICT) is growing rapidly and the utilization of IT (Information technology) in the field of education is already a natural thing. Therefore, many schools today are competing to advance the quality and quality for better education quality. Therefore, SMP Negeri 1 Talangpadang is demanded to improve the effectiveness in learning, one of them by making the visual basic-based application system of borrowing and returning books in the library of SMP Negeri 1 Talangpadang. In the processing of library borrowing data that is done manually it will make mistakes to the data and fatal mistakes due to data processing which is done manually and will slow down the working process of librarian. Therefore, the author took the initiative to create a Visual Basic 6.0 based library applications.

1.1. Background

In SMP Negeri 1 Talangpadang, the process of borrowing and returning books is still done manually by using a book of borrowing and returning that must be recorded. So the problems that is often happened such as writing the date of borrowing and returning book which spend a lot of paper and need data storage space

members, calculation less accurate, and reporting takes a long time.

1.2. Problem formulation

The problem discussed in this research was how to build library application system in SMP Negeri 1 Talangpadang using Visual Basic 6.0.

1.3. Problem limitation

- 1) This application is only used in SMP Negeri 1 Talangpadang.
- 2) Member registration
- 3) Input applicant data.
- 4) The process for inputting new book data.

1.4. Purpose

The purposes of this research were:

- 1) Availability of Borrowing and Returning book application system in SMP Negeri 1 Talangpadang library to ease library data processing.
- 2) Accelerating of working process finishing
- 3) Simplifying implementation of work
- 4) Improve the quality of working result
- 5) Improving the efficiency and effectiveness of work
- 6) Generating library application system in SMP Negeri 1 Talangpadang
- 7) Simplifying information delivery to the member.

1.5. Benefit

- 1) Improving effectiveness and efficiency in data processing of borrowing and returning book.
- 2) Simplifying member data, book data and transaction data
- 3) Accelerating process in making report.
- 4) Improving data safe.
- 5) It can reduce the similar data input

2. Planning analysis and implementation

a) Analysis

Needs collection process is done intensively to specify the software requirements to be understood software as required by the user.

b) Design

A multi-step process that focuses on the design of programming software include data structures, software architectures, interface representation, and coding procedures.

c) Developing Program Code

The design should be translated into software program. The result of this stage is the computer program in accordance with the design that has been made at the design stage

d) Testing

This test focuses on the software in terms of logical and functional and ensures that all parts have been tested.

1) Context Diagram

Context diagram is a diagram that consists of a process and illustrate scope of a system. Context diagram is the highest level of DFD that configuring all inputs to the system or output of the system. It will give illustration to the whole system. The system is bounded by the boundary (can be figured with broken lines). In the context diagram there is only one process. There should be no store in the context diagram. The context diagram contains the general illustration (outline) of the system to be created. In a sentence, it can be said that this context diagram contains "anyone who gives data (and any data) to the system, as well as to anyone information (and any information) that the system should generate." So, what is needed are : (1) Anybody who will provide data to the system, (2) What data give to the system, (3) to whom the system should provide information or reports, and (4) what kind of content / type of report should the system produce

2) DFD

Data Flow Diagram (DFD) is a diagram that uses notations for illustrating flow of system data, whose use is helpful to understand the system logically, structured and clear. DFD is a tool in illustrating or explaining the work process of a system.

3) ERD

ERD is a model to explain the relationship between data in the database based on the basic objects of data that have relationships between relations. ERD to model the data structure and relationships between data, to illustrate that used some notations and symbols.

a) Entity

Entity is an object that represents something real and can be distinguished from something else. The symbol of this entity is usually illustrated with a rectangle.

b) Attribute

Each entity must have an element called an attribute that works to describe the characteristics of the entity. The contents of the attribute have something that can identify the contents of each element with another. Attributes figure is represented by ellipse symbols.

c) Relation

The relation between a number of entities derived from different entity sets. Relationships can be figured as follows: Relationships between two entity sets (eg A and B) in one database.

4) Implementaltion

To implement the design of this application program, then it is needed a tool in the form of a computer, where to operate the

computer itself also requires three supporting components of hardware, software, brainware

3. Form design

3.1. Main menu form

Figure 1 shows main menu form

Fig. 1: Main Menu Form.

3.2. Entry form for book data

Figure 2 shows entry form for book data

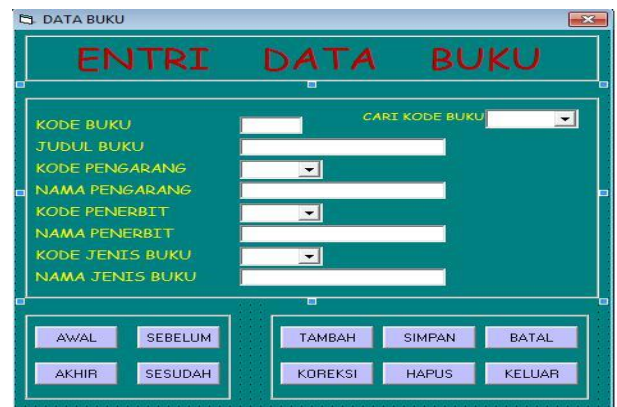

Fig. 2: Entry Form for Book Data.

3.3. Book returning form

3.12. Author data entry form

Figure 12 shows author data entry form.

Fig. 12: Author Data Entry Form.

4. Conclusion

Based on the analysis that has been done by the authors of the problems on the SMP 1 Talangpadang library, it can be concluded the conclusion namely: 1) This application can streamline storage media and improve data security because all data are stored in database storage media. 2) This application can shorten the time in making member data reports, borrowing and returning book reports, and fines so that the report can be received by the principal on time.

The authors give some suggestions to SMP Negeri 1 Talangpadang namely: 1) This application is expected can be implemented by SMP Negeri 1 Talangpadang. 2) It is expected of holding training to librarians that have associated with this application to make this application run well as needed. 3) It is expected to perform routine maintenance of this app. 4) It is realized that the need for more comprehensive information is an important thing for business entities, namely to increase the business of borrowing and returning library books at SMP Negeri 1 Talangpadang, in achieving the results that have been planned, based on the above and also the limitations of this application, then is expected to further researchers to be able to improve this application.
