TREATMENTS FOR AGGRESSION
Treatments

**Medications**
- Lithium
- Carbamazepine

**Psychotherapy**
- Group therapy
- Cognitive Behavioral Therapy
- Behavior Modification
CONCLUSION

- Appropriate actions should be taken to prevent patients or children with aggression from indulging into a more deteriorating situation.

- Identification of children with aggression should be detected earlier and interventions can be made for this case.

- Besides, education is important in shaping the inner self and thinking of the people with aggression. Self-control should be instilled in them as well.
