EFFECTIVENESS OF MONORAIL TRANSPORTATION IN KUALA LUMPUR

ZULHILMI BIN HARMAN

A project report submitted in partial fulfilment of the requirement for the award of the degree of Master of Engineering (Civil – Transportation and Highway)

Faculty of Civil Engineering
Universiti Teknologi Malaysia

JANUARY 2012
Specially dedicate to my beloved father Harman Bin Mat Rafar and my beloved mother Zainab Mohd Noah and also my sibling Zulhairi Bin Harman.

Thanks you for your support, sacrifice and loving me.
ACKNOWLEDGMENT

Firstly, thanks to Allah for with His grace I can accomplish this project successfully. Here I want give full appreciation and thank to my supervisor Assoc. Prof. Dr. Johnnie Ben Edigbe, for all the assistance and cooperation during the completion of this report.

A lot of thank to Ismail Bin Mamyudi, Head of Operation, Mazuwin Binti Mat Daut, Executive of Operation Planning and Logistic, Ganesh Pramaguru, Vehicle Maintenance Engineer, Jaafar Md Amin, Head of Train Operations, Jasry Shamsul Bin Mohd Saari, Head of Infrastructure Maintenance and Engineering, Mohd Ridzuan Bin Mohd Iklas, Head of Control Centre and Nor Azahar Bin Ramli, Head of Safety and Security that involved in accomplishing this report. All the cooperation and commitment have eased me to complete this report.

Lastly, I dedicate my gratitude to all my colleague and those involved directly and indirectly that have helped and encouraged me to finish this report. The goodwill, discretion and sacrifice will be remembered. Thank you.
ABSTRACT

In Kuala Lumpur the Government of Malaysia is investing on several public transports including KL Monorail. Monorail is a transportation system based on a single rail, which act as its sole support and its guide way. The purpose of the study is to assess the effectiveness of monorail transportation system performance in Kuala Lumpur through the capacity analysis and quality of service evaluation of the train those it look at user’s perception and experience by using the system. Data on passenger load of the KL Monorail obviously showing a pattern according to direction and Passenger load with the highest number recorded at Raja Chulan station during AM peak hour period for both directions. Capacities of the monorail are 2493 p/hr for KLS to TSA direction and 2691 p/hr for TSA to KLS direction. Research found that, more than one segment facing over limits on the passenger demand compared to the ability. There are many of the segments of the KL Monorail service track are facing LOS of E and F. Regarding to the founding, some suggestion improvement that can be apply to increase the effectiveness of monorail transportation system performance in Kuala Lumpur in context of transferring people along their track service.

1 INTRODUCTION

1.1 Background 1
1.2 Problem Statement 1
1.3 Aim and Objectives of Study 3
1.4 Scope of Study 3
1.5 Significant of Study 3
1.6 Limitation of Study 4
2 LITERATURE REVIEW

2.1 Introduction 5

2.2 Kuala Lumpur (KL) 5

2.3 Transportation System in Kuala Lumpur 6

2.4 Public Transportation Performance and Level of Service 8

2.5 Level of Service (LOS) 10

2.6 Concept of Capacity 11

2.6.1 Dwell Time 15

2.6.2 Capacity Utilization 17

2.7 Concept of Quality of Service 18

2.7.1 Availability 19

2.7.2 Comfort and Convenience 20

2.7.3 Quality of Service and Level of Service (LOS) 20

2.8 Quality of Service Factor 21

2.8.1 Availability Factors 21

2.8.1.1 Service Coverage 21

2.8.1.2 Scheduling 22

2.8.1.3 Capacity 22

2.8.1.4 Information 22

2.8.2 Comfort and Convenience Factors 22

2.8.2.1 Passenger Loading 22

2.8.2.2 Reliability 23

2.8.2.3 Travel Time 23

2.8.2.4 Safety and Security 23

2.8.2.5 Cost 24

2.8.2.6 Appearance and Comfort 24

2.9 Development of Monorail Technology 24

2.10 Monorail System in Asia Region 25

2.10.1 Chiang Mai Zoo in Bangkok, Thailand 25

2.10.2 Sentosa in Singapore 25

2.10.3 Shanghai in China 26
2.10.4 Palm Jumeirah in United Arab Emirates 26
2.10.5 Wolmido Monorail Incheon in South Korea 26

2.11 Type of Monorail 27
2.12 KL Monorail in Kuala Lumpur 28
  2.12.1 Monorail Characteristics 29
  2.12.2 Monorail Vehicles 30
  2.12.3 Track Guideway and Network 34
  2.12.4 Signal and Communication System 35
  2.12.5 Control System 36
  2.12.6 Charge Rate 37
  2.12.7 Trains Schedule and Trains Operations 37
  2.12.8 Safety and Security Features 39

3 METHODOLOGY 40
3.1 Introduction 40
3.2 Location Study 41
3.3 Equipment Used for Data Collection 41
3.4 Data Collection Method 42
  3.4.1 Determine the Maximum Passenger Load at Stop Station 42
  3.4.2 Determine the Dwell Time at Stop Station 42
  3.4.3 Determine the Headway 43
  3.4.4 Determine the Person Capacity of Monorail 43
  3.4.5 Determine the Standing Passengers Area 43
  3.4.6 Structured Interview 44
3.5 Analysis Method 45
  3.5.1 Level of Service Analysis 45
3.5.1.1 Develop the Passenger on Board Ranges
3.5.1.2 Develop the Loading Factor Ranges
3.5.2 Satisfaction of Passenger Analysis

4 RESULTS AND DATA ANALYSIS

4.1 Introduction

4.2 Passenger Load of KL Monorail

4.2.1 Passenger Load on Track Segments

4.2.2 Passenger Load of Segment I (Between KLS and TUN)

4.2.3 Passenger Load of Segment II (Between TUN and MAH)

4.2.4 Passenger Load of Segment III (Between MAH and HAH)

4.2.5 Passenger Load of Segment IV (Between HAH and IBI)

4.2.6 Passenger Load of Segment V (Between IBI and BNG)

4.2.7 Passenger Load of Segment VI (Between BNG and RAN)

4.2.8 Passenger Load of Segment VII (Between RAN and BAS)

4.2.9 Passenger Load of Segment VIII (Between BAS and MKU)

4.2.10 Passenger Load of Segment IX (Between MKU and CIT)

4.2.11 Passenger Load of Segment X (Between CIT and TSA)

4.2.12 Passenger Load of Segment I (Between KLS and TUN)
4.2.13 Reference Passenger Load of Segment II (Between TUN and MAH) 150
4.2.14 Reference Passenger Load of Segment III (Between MAH and HAH) 152
4.2.15 Reference Passenger Load of Segment IV (Between HAH and IBI) 154
4.2.16 Reference Passenger Load of Segment V (Between IBI and BNG) 156
4.2.17 Reference Passenger Load of Segment VI (Between BNG and RAN) 158
4.2.18 Reference Passenger Load of Segment VII (Between RAN and BAS) 160
4.2.19 Reference Passenger Load of Segment VIII (Between BAS and MKU) 162
4.2.20 Reference Passenger Load of Segment IX (Between MKU and CIT) 164
4.2.21 Reference Passenger Load of Segment X (Between CIT and TSA) 166
4.2.22 Reference Passenger Load of All Segment (Between KLS and TSA) 168

4.3 Person Capacity of KL Monorail 174
  4.3.1 Dwell Time 174
  4.3.2 Headway 177
  4.3.3 Person Capacity 178

4.4 Quality of Service and Level of Service 179
  4.4.1 Quality of Service Survey 179
    4.4.1.1 KL Monorail Service Demand 179
    4.4.1.2 Service Coverage 180
    4.4.1.3 Scheduling 182
    4.4.1.4 Capacity 182
    4.4.1.5 Information 183
    4.4.1.6 Passenger Load 183
    4.4.1.7 Reliability 184

CHAPTER 1

INTRODUCTION

1.1 Background

Generally, transportation system may be defined as consisting of the fixed facilities, the flow entities and the control system that people and goods use to overcome the friction of geographical space efficiently in order to participate in a timely in some desired activity (Papacosta, 1987).

The government of Malaysia has invested heavily in transportation system including the Kuala Lumpur monorail system (KL Monorail). Monorail is transportation system based on a single rail which acts as its sole support and guide. KL Monorail was designed, constructed and officially opened on 31 August 2003. It serves 11 stations running 8.6 km (5 mi) with two parallel elevated tracks. It connects the Kuala Lumpur Central transport hub with the "Golden Triangle". It was completed at a cost of MYR 1.18 billion by the KL Infrastructure Group (KL Infra).

In Malaysia, public transportation including KL monorail is subsided by the government. However the values of the subsidy provided are relatively not enough and may not be able meet the surging demand (Kiggundu, 2009). This situation will give challenge to public transportation to balance their cost and income and at the same time provide effective services to their passengers.
Many people who claim to be discussing productivity are actually looking at the more generally issue of performance (Tangen S., 2002). In a study carried out by Kasipillai and Chan (2008), targeting a sustainable transportation system in Malaysia hinges on, (i) alteration of charges on road taxes and car insurance, (ii) elimination of fuel subsidies, (iii) imposition of fuel taxes amendment in the bases for car taxation, (iv) congestion charging particularly in Kuala Lumpur and (v) national road pricing. Current trend of ridership of the public transportation in Kuala Lumpur are generally low with only 20% of the total person trip in Kuala Lumpur as compared to neighbouring countries where it ranges from at least 40% to over 70% (Schwarcz, 2003).

Performance of transportation study hinges on effectiveness, therefore indicators such as basic accessibility, travel time, reliability, and quality of service, frequency of service and passenger density have to be evaluated. Level of service concept is also a qualitative measurement that is divided into six levels, A through F representing a range of values defined by the characteristic of a particular service measures. Level A, is the best and F is worst.

1.2 Problem Statement

KL Monorail is one of the public transport service provided by Syarikat Prasarana Negara Berhad. The service operation began in 2003, the total number of the KL Monorail passenger are only 2,927,542. This number increases yearly, however, in the year 2009, the total passengers carried by KL monorail decreased by 3.4%. In any case, ridership is an important performance indicator that will allow transport operators to provide services efficiently. KL Monorail is a train transit service system aimed at reducing travel time and increasing mobility by the urban passengers. If the service performance is low, passenger are likely to be less satisfied over time. Conversely, high service performance is assumed to increase satisfaction with the service (Firman, 2004).
The purpose of the study is to assess the effectiveness of monorail transportation system performance in Kuala Lumpur. Since the study hinges on effectiveness, it is pertinent that, transit capacity and quality of service be assessed. In the light of the aim of the study, the objectives needed to achieve the aim are presented in the next section.

1.3 Aim and Objectives of Study

The aim of the study is to assess the effectiveness of monorail transportation system performance in Kuala Lumpur. Objectives needed to achieve the aim are:

(i) To determine the passenger load at peak hour.
(ii) To determine the person capacity of monorail.
(iii) To determine the level of service (LOS).

1.4 Scope of Study

The scope of the study will be focused on the performance of the KL Monorail system in Kuala Lumpur. The system connects KL Sentral to Titiwangsa with a total length of 8.6 km and serves 11 stations. The study did not take into account special event days, night travels and rainfall conditions.

1.5 Significance of Study

Results of the study may be useful to the operator of KL monorail as well as give an insight into the monorail users view of the services provided. By getting a
feedback of the customers’ expectations, it is hoped that KL monorail will be positioned to give continuous service improvement while remaining competitive.

1.6 Limitation of Study

The study is limited by time and fund. The resources available to the researchers are sparingly thin nevertheless the study focused on peak hour round trip KL monorail travel under dry weather and daylight conditions. Data collection and observation of the passenger density were carried out on week working days only so as to reflect a strong trip attractions generated by employment among others. All the data collections were done manually using the basic instruments, including the questionnaire forms. All the data collected were analysed according to Trains Capacity and Quality of Service Manual and Highway Capacity Manual (HCM 2010). In spite of regrettable ardent errors associated with manual data collection, the study is buoyant with confident that the study outcomes will depict the true and fair view of KL monorail quality of service.
