AUTOCAD for Engineers

Synopsis:

AUTOCAD for Engineers is intended as a guide especially for Mechanical Engineers to implement AutoCAD specifically to produce engineering drawing. It covers not only 2D drawing, but also Solid Modelling. The contents of this book are organised in three main parts which gradually introduce readers to AUTOCAD. The first part of the book focuses on selected basic commands sufficient to begin AutoCAD drawing. Having mastered the basic commands, the second part of the book introduces readers to more specific commands needed in producing more sophisticated engineering drawing. The topics that are covered include geometry, orthographic drawing, sectioning drawing, and isometric drawing. Once readers have mastered the basic and specific commands, the final part of the book will guide them through the process of implementing solid modelling in the creation of engineering drawing.

AUTOCAD for Engineers can be used as a text book or a reference book for AutoCAD-based Engineering Drawing course and can complement any engineering drawing book.
AUTOCAD for engineers

Table Of Content:

Preface

CHAPTER 1 INTRODUCTION TO AUTOCAD
Starting the AutoCAD
Understanding the AutoCAD Screen
Interfacing with AutoCAD
Pull-Down Menu, Icon and Pop-up Menu.
Command Prompt Area
Dialogue Box
Standardization Used in This Book
My First AutoCAD Drawing
Line Command
Erase Command
Keyboards and Function Keys
Esc, Delete, and Arrow Keys
Function Keys
Setting the Grid and Snap Distance
The Current Skill
Exercise

CHAPTER 2 BASIC PRINCIPLES OF AUTOCAD
Defining a Point
Coordinate System (CS)
Absolute Coordinate System (ACS)
Relative Coordinate System (RCS)
Polar Coordinate System (CS)
Object Snap

How to Activate the Object Snap?

Types of Object Snap

Understanding the AutoCAD Command

Entity Related Command
Circle
Arc
Ellipse
Polygon

Editing the Related Command

Selection Set Methods
Pick Box or Selection Box
All
Window (w)
Crossing (c)
Last (last)
Previous (p)
Fence (f)
Remove (r)
Add (a)

Editing Commands That Do Not Change the Entity
Offset
CHAPTER 3 PREPARATION FOR THE ENGINEERING DRAWING

Setting the Unit and Precision

Dimensioning

Dimension Variables

Lines

Symbols and Arrows

Text

Fit

Primary Unit

Alternate Unit

Tolerance

Dimension Types

Linear Dimensioning

Angular Dimensioning
Radial and Diametric Dimensioning
Layer
Icons
Setting the Line Type
Setting the Layer
Model Space and Paper Space
Activating the Model Space and Paper Space
Viewport Properties
Template Preparation
Dimension Variables Setting
Layer Setting
Title Block
Setting the Paper Size
Setting the Drawing Title Block
Text
Plotting Device Preparation
Saving and Retrieving the Template
Exercise

CHAPTER 4 APPLICATIONS ON ENGINEERING DRAWING I
Geometric Drawing
Illustrative Example
Stage 1
Stage 2
Stage 3
Stage 4
Orthographic Drawing
Xline
Point Filter
Sectioning
Bhatch or Hatch
Illustrative Example: Orthographic and Sectioning
Front View
Side View
Top View
Exercise

CHAPTER 5 APPLICATIONS ON ENGINEERING DRAWING II
Isometric Drawing
Illustrative Example
Plotting the Drawing
Scaling the Drawing
Production the Hardcopy
Dimension Variables
Exercise

CHAPTER 6 3D WIREFRAME AND SOLID MODELLING
3D Coordinate System
3D Viewing
Vpoint
UCS
UCS Origin
UCS Setting by Rotation of Principle Axes
UCS Setting by 3 Points
View
UCS Setting Using Object
UCS Setting Using Face
UCS Setting Using WCS
Naming the UCS
UCSicon
Plan
3D Wire Frame
Solid Modelling
Primitive Bodies
Box
Wedge
Cylinder
Cone
Sphere
Torus
Pyramid
Extrusion, Revolved, Swept and Loft
Profile Creation
Extrude
Revolve
Sweep
Loft
Boolean Operation and Modelling Technique
Illustrative Samples

Engineering Drawing Generation

Creating First Projection

Creating Second Projection Using Ortho Option

Creating Third Projection Using Section Option

Creating Engineering Drawing

Completing the Drawing

Exercise
